Art Unit: 1714

The amendment received 20 May 2005 has been made of record. Claims 1-42 are pending.

The rejection over EP '818 contained in the previous office action is withdrawn in view of applicants' arguments.

Claims 1, 3, 4, 6-8, 10-15, 20-27, 29-31, 33-37 and 40-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Song et al.

This rejection is maintained substantially as set forth in the previous office action with the following additional comments.

It is the position of the examiner that the crosslinking agents of thereference would inherently possess applicants' claimed physical properties since the molecular weight of these crosslinkers falls within the range specified as suitable by applicants.

Applicants' limitation to melt mixing is a process step within a claim for a product.

Applicants need demonstrate that this process step produces a patentably distinct product from that of the reference.

Claims 1, 3 and 5-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakaya et al.

Nakaya et al disclose aqueous dispersions suitable for coating applications.

These compositions are taught as comprising blocked isocyanate resins which are taught as being melt blended with an acrylic resin containing a water dispersible functional group (carboxyl). The carboxyl groups are taught as being neutralized with 0.6 to 1.2 equivalents of a basic compound. This basic compound preferably has OH groups. While the Tg of these isocyanates is not explicitly recited, it is the position of the

Art Unit: 1714

examiner that Tg values such as claimed instantly would be inherent to the isocyanates of the reference since they would need to melt below the temperature at which the blocking agent would be released. Applicants' limitations to corrosion resistance, gloss retention etc. are seen as inherent to the compositions of the reference since the chemical limitations are met.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward J. Cain whose telephone number is (571) 272-1118. The examiner can normally be reached on M-F from 10:00 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on 571 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
